Sudarshan Karn

+91 8434507008 — Sudarshankarn@gmail.com — linkedin.com/in/Sudarshan — github.com/Skarnix

Summary — Results-driven **Team Manager** and **Zoho CRM Developer** with a track record of leading **data and automation teams** — owning bandwidth planning, performance reporting, fresher training, and hierarchical process redesign. Combines hands-on technical depth in **Zoho CRM**, **SQL**, and **Deluge scripting** with a people-management focus on team capacity, SLA tracking, and structured onboarding. Driving a long-term vision to modernize manual, hierarchy-driven workflows into **AI-assisted automation** for large-scale operational data. Proven success reducing manual processes by **35%** through intelligent workflow automation, backed by strong **stakeholder engagement**, **change management**, and independent execution in remote environments. Complementary skills in **Power BI**, **Looker Studio**, and **Python** strengthen technical depth in data-driven business solutions.

Skills

Team & Ops	Bandwidth Planning, Reporting, Training, SOPs	**CRM Design**	Modules, Workflows, System Design
Zoho CRM	Configuration, Automation, Data Migration	**Integrations**	REST APIs, Webhooks, Zoho APIs
BI & Reporting	Zoho Analytics, Power BI, Dashboards	**Tools**	GitHub, JavaScript, TensorFlow
Data & SQL	SQL, ETL, Python, Excel	**Business**	Stakeholder Mgmt, Change Mgmt, RCA

Experience

GemPundit **Apr 2026 – Present**

Team Manager – Data and Automation (L2)

- Managing the **Data and Automation** team, owning bandwidth planning, task allocation, and workload distribution across Doers, Team Leads, and cross-functional stakeholders
- Built **team reporting and performance dashboards** to track throughput, SLA adherence, and bottlenecks, enabling data-backed capacity and hiring decisions
- Designed and rolled out **structured onboarding and training programs** for freshers, cutting ramp-up time and standardizing skill benchmarks across the team
- Redesigned **department-based approval and escalation hierarchies**, replacing a rigid legacy model to improve turnaround, ownership, and cross-team accountability
- Driving a broader **automation roadmap** to modernize hierarchical, manual-approval-driven workflows into event-driven, self-service systems
- Architected **large-scale data pipelines** (bulk imports, validation, reconciliation) to handle high-volume operational data with minimal manual intervention
- Leading early efforts to route operational and CRM data into **AI-assisted automation** — anomaly detection, smart task routing, and predictive reporting — to reduce manual oversight at scale
- Partnering with leadership on **process optimization and change management**, translating operational pain points into scalable systems and measurable efficiency gains

Elevolt Global **Mar 2024 – Apr 2026**

Tech Developer – Zoho CRM Development

- Designed and deployed **Zoho CRM solutions** — custom modules, workflow automation, and data migration — for 100+ users across inventory, HR, and operational functions
- Reduced operational overhead by **35%** through advanced **Zoho workflow automation**, eliminating manual data entry
- Built **data migration pipelines** and **API/webhook integrations** using SQL, Deluge scripting, and REST APIs, ensuring 100% data integrity across systems
- Owned the **full CRM implementation lifecycle** — requirements, design, development, testing, and deployment — plus **Zoho Analytics** dashboards for executive reporting
- Provided post-deployment support and training, resolving 50+ CRM issues through root cause analysis

Amazon **Jul 2022 – Dec 2022**

Senior Customer Support Executive

- Resolved customer inquiries within established **SLAs**, contributing to a **35% reduction in escalations** and **95% satisfaction rating** across 40+ customers per shift
- **Analyzed support workflows and performance KPIs** to identify inefficiencies and drive data-informed process improvements
- **Collaborated with cross-functional stakeholders** to gather requirements and implement process enhancements aligned with business goals

Urban Company, IENERGIZER **Aug 2021 – Jul 2022**
Customer Support Executive

- **Led team in analyzing customer trends and data patterns**, resulting in a **25% decrease in issue resolution time**
- Reduced unresolved issues by **72%** by identifying gaps beyond automated system capabilities through structured data analysis
- **Conducted root cause analysis** to systematically resolve recurring issues and **gathered stakeholder requirements** to improve service delivery processes

Education

Shyam Lal College, IGNOU **2024 – 2026**
Master of Computer Applications (MCA) *Delhi, IN*
Lalit Narayan Mithila University **2016 – 2019**
Bachelor's in Arts *Darbhanga, IN*
Marwari College **2014 – 2016**
Intermediate *Darbhanga, IN*

Certifications

- DS – Data Science
- ADCA – Advance Diploma in Computer Science

Projects

Zoho CRM Implementation – Inventory Management System
Zoho CRM, Deluge, SQL, Zoho Analytics

- **Designed and developed custom Zoho CRM modules** for inventory tracking, supplier management, and procurement workflows
- Built **automated workflows and Deluge scripts** to handle stock movements, low inventory alerts, and supplier notifications without manual intervention
- Migrated **10,000+ inventory records** from legacy Excel system to Zoho CRM with full data validation and reconciliation
- Created **executive dashboards in Zoho Analytics** tracking inventory KPIs, stock turnover, and supplier performance in real-time
- **Result:** Reduced manual data entry by 40%, improved inventory accuracy to 99.8%, and cut process execution time by 25%

Vehicle Accident Analysis
Power BI, SQL

- **Wrote SQL queries** to extract and transform accident data; designed **interactive Power BI dashboards** for stakeholders to explore patterns by location, time, and weather
- Delivered **data-driven insights** across the full BI lifecycle — from requirements gathering to deployment
- **Outcome:** Identified 5 high-risk locations accounting for **40% of serious accidents**

AirBnB Exploratory Data Analysis
Python, SQL, Pandas, Matplotlib

- **Queried and cleaned large datasets using SQL and Pandas** to ensure data accuracy and consistency prior to analysis
- Visualized relationships between listing features using matplotlib to identify pricing and booking trends
- **Impact:** Discovered that professional photos drove a **35% higher booking rate**

Heart Disease Prediction
TensorFlow, Keras, sklearn, Seaborn

- Built a deep learning model using TensorFlow/Keras; used **Seaborn for EDA** to identify patterns in clinical data
- Employed Scikit-learn for pre-processing, model evaluation, and performance fine-tuning
- **Result:** Achieved **89% prediction accuracy** for early identification of at-risk patients
